2. On 30 April Dr. McMillan, Dr. Scoville and M visited the Itek Plant and received a briefing concern of COROMA cameras and the proposed use of camera #51: photography to increase the ground resolution of U-2; Itek proposed that a newer "J" camera be used as the model for testing, etc., thereby making #51 available Dr. McMillan's reaction to this briefing is unknown, is pursuing this matter to seek Air Force support preparing several proposals which would involve the camera separate camera outside of the normal COROMA line by parts made available from that program. The failure ARGON shot may necessitate a launch of a second ARGON the near future, thereby freeing a camera previously a COROMA launch.	ning the status for IDEALIST photography. engineering for IDEALIST. however, 25 . MODRA

The ABGON shot launched on 26 April failed to obtain orbit. According to General Greer poor judgment by a IMSD engineer resulted in an error in the horizon sensor escent setting which caused injection at a positive flight path angle exceeding the limit for erbit attainment. This error was contributed to the unique combination of an ARGON flight on an AMENA "D", and caused the vehicle to impact over the Urals in the USSR. The status of the camera package and nose come is presently in debate with some suggesting that the vehicle's gas would have exploded, thus disintegrating the vehicle prior to impact. The less optimistic content is that there is a good possibility that an analysis of the "wreckage" of the vehicle could substantiate the presence of film, camera, etc.

OXCART

- 1. Three more J-58 and one J-75 engine experienced foreign object damage last week (21 thru 26 April). Engines #213 and #216 are not serviceable but #214 and J75 091 can be repaired. An intense investigation is being made at this time to establish the cause of this damage.
- 2. The Programs Staff, OSA, has prepared a list of problem areas in the OKCART Program for the AD/OSA which indicates who is taking action on each problem at this time. This Staff will monitor this program to see that timely action is taken to alleviate these problems as the OKCART Program progresses.

25X1A 3. Regarding the proposed increase in positions at the Depot, Mr. Cunningham has suggested that someone from the Air Force Logistics Commend make an impartial survey of the workin order load distribution at both 25X1A to permit Headquarters to maintain a proper balance between these two essentially supplemental activities. It seems that at this time approxi-Lockheed is dispatching directly from Burbank to 25X1A mately seven truck loads of aircraft parts per week, which 25X1A must pick up on their record-keeping systems and then transfer this for incorporation in the master records information back to there. Mr. Commingham believes we should investigate this practice before it becames a way of life with Lockheed. Because this procedure new exists, he questions that _______needs to nearly double the existing strength and feels that this should be considered before needs to nearly double their 25X1A personnel. levying a requirement upon the Air Force for 25X1A
